CONCEPT PAPER:

WEB DEVELOPMENT PROJECT ON SPORT MEETS:

Team Members:

Sanket Adhikari (Leader), Rajan Aryal & Bibash Thapa Magar.

Problems:

Till the present context, we have been facing lots of problems during sports meets due to bad management of organizers. So, in the regards of that problems we are planning to make a website for the sport meets.

Concepts:

The following website will help the organizers as well as the participated players to make the sport meets go smoothly. From the website, the organizers can inform the players about time schedule like when the game will start, where to gather & what game will be played. The website also provides login section where team leaders or semester leaders (login users) can access or edit team information according to their requirement. The player or the audience who wants to know about the teams, fixtures and results of the day can be informed through the website easily. To make the game go smoothly without any hindrance code of conduct will also be mentioned. Similarly, the one who cannot attend the event unfortunately can enjoy the moments through media section which includes photos, small clips and so on.

Looking forward for a positive feedback.

Thank you!
